SO YOU'VE BEEN TOLD...

YOUR FIREPLACE NEEDS A **NEW LINER**

The inside of the chimney matters.

A NEW STAINLESS-STEEL LINER.

— COMMON SIGNS

- Cracked clay flue tiles
- Gaps between liner sections
- Damaged mortar joints
- Smoke chamber or flue issues
- Poor draft or smoke problems
- Liner sized wrong for the flue

THE GOAL

- 1 Create a proper vent path.
- 2 Help smoke leave the home correctly.
- 3 Improve safety and performance.

Questions about your estimate? Call or text — we're happy to walk you through it.

THE DETAILS, EXPLAINED →

THE SHORT VERSION

YOUR LINER, **EXPLAINED**

WHY IT MATTERS

A fireplace liner protects the chimney structure and carries smoke and heat safely out of the home. Even if the fireplace looks normal from the room, problems can hide inside the flue — where they're hard to see without an inspection.

WHY NOT LEAVE IT ALONE?

Some liner damage is hidden inside the chimney. Cracks, gaps, missing mortar, or sizing issues all affect how the fireplace vents. A new liner is recommended when the existing one can no longer do its job reliably.

A SOUND LINER. A SAFE FIRE.

— WHAT A NEW LINER HELPS ADDRESS

- Damaged flue tiles
- Gaps inside the chimney
- Poor draft conditions
- Smoke movement concerns
- Heat exposure to the chimney structure
- Long-term fireplace reliability

WHAT HAPPENS NEXT?

Your estimate explains the exact work and the cost — no surprises. We're happy to walk you through it.
